

HYPER Unveils CameraMator - Wireless Tethered Photography Solution

Wirelessly Control DSLR Cameras and Instantly Review Captured Images
with iPad, iPhone and Android Devices

Tuesday, January 8, 2013 LAS VEGAS, NEVADA: Sanho Corporation (Consumer Electronics Show 2013, North Hall, Booth 4812), creators of the award winning HYPERS line of portable power and storage products, today announced the release of CameraMator, the missing wireless link between DSLR cameras and the iPad, iPhone and Android devices.

CameraMator turns mobile devices into both a wireless remote control with access to advanced features of DSLR cameras, and a wireless high-resolution viewer to review and share photos beyond the camera's viewfinder.

In conjunction with HYPERS, CameraMator was designed by Woobly Inc. utilizing HYPERS' iUSBport technology to wirelessly interface DSLR cameras' USB ports with WiFi-enabled mobile devices like the iPad, iPhone, Mac, Windows and Android devices.

Notables:

- View DSLR camera live viewfinder image wirelessly on iPad, iPhone and Android mobile devices
- Instantly review and transfer photos as they are taken to mobile devices without any wires
- 500+ image buffer to support continuous shooting
- Photo Sharing
- Wireless Camera Control with advanced features like Intervalometer, HDR bracketing and self-timer
- Allow DSLR camera to be placed in hard to reach location and control it remotely with mobile device
- Attaches to DSLR camera via hotshoe or tripod mount with connection to the DSLR camera USB port
- Integration with Adobe Photoshop, Bridge and Lightroom to allow image review and edit during shoots
- Native platform support for iOS, Mac, Windows and Android
- Compatible with most Canon and Nikon DSLR cameras (full list below)

Product Specifications:

Screen: Mono 132 x 32 pixels LCD
