

HYPER Streamlines Photo Backup with ColorSpace UDMA 2

Next Generation Memory Card Backup Device Wirelessly Shares Photos/Video/Data With iPad, iPhone and WiFi-enabled Devices

Tuesday, January 8, 2013 LAS VEGAS, NEVADA: Sanho Corporation (Consumer Electronics Show 2013, North Hall, Booth 4812), creators of the award winning HYPER line of portable power and storage products, today announced the latest generation of portable storage devices, the ColorSpace UDMA 2, will be available for hands on demonstrations at CES 2013.

The latest in the HyperDrive series, ColorSpace UDMA 2 enables users to back up photos, video and data from various memory cards at swift UDMA 27MB/s speed. ColorSpace UDMA 2 allows both JPEG/RAW photo viewing on its color LCD screen, as well as making its entire hard drive content wirelessly available on any WiFi-enabled device, including iPad, iPhone and Android devices.

Notables:

- Boasts an improved GUI (graphical user interface) enabling easy navigation of data
- Perfect for both professional and amateur photographers, ColorSpace UDMA 2 brings a new standard of power to photo/data backup and sharing – upping the ante in backup speed to 27 MB/s and wireless sharing with mobile devices
- Optional USB OTG adapter allows direct backup from digital cameras, USB drives and synchronization of the entire UDMA 2 with another USB hard drive
- Provides the security of multiple backups without the burden of a heavy laptop in mobile scenarios
- Advanced features like RAW image decoding and recovery of lost/deleted photos from memory cards
- Ideal for those who need to view all their photos, video and data on iPad, iPhone and Android devices, but are in need of a much larger storage platform

Product Specifications:

Screen: 3.5" TFT 320 x 480 Pixels Color LCD
